DETAILED ACTION

Claims 1-10 are presented for examination.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Mackey et al (hereinafter 'Mackey') US 7,123,674.

Mackey was cited as the prior art reference in the previous office action. As such, Mackey's teachings are hereby incorporated by reference.

As to claims 1-10, Mackey teaches these claims according to the reasoning set forth in the previous office action.

Response to Arguments

Applicant's arguments filed 2/23/2009 have been fully considered but they are not persuasive. Applicant argued that the XOR gate [Figure 4, 415] does not induce changes in the value of the control signal. Applicant further argued that the XOR gate would not be operable upon a single input, nor would it be able to amend a first value. Examiner respectfully disagrees with Applicant's arguments. The claim simply states "a repeater for inducing changes in the value of the control signal." An XOR gate is

Page 3

capable of inducing changes in a signal. One of the inputs to the XOR gate could be considered a control signal. Therefore, depending on the second input, a change can be induced in the value of the control signal consistent with a truth table of an XOR gate. The claim does not specify that the repeater is operable with only a single input. The claim only states that the repeater induces changes in the control signal. The change can be induced in an arbitrary number of ways including using an XOR gate.

Applicant also argued that the delay performed by a D flip-flop does not delay until a transition in the timing signals is detected. Examiner respectfully disagrees. A D flip-flop is capable of delaying a signal until a clock edge is detected. Therefore, the input, 'D,' is not output until a clock edge is detected. The D flip flop must wait until a clock edge is inputted in order to output the signal that came through the 'D' input. This effectively delays the input to the D flip flop until a clock edge is detected.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Application/Control Number: 10/591,546 Page 4

Art Unit: 2115

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JAWEED A. ABBASZADEH whose telephone number is (571)270-1640. The examiner can normally be reached on Mon-Fri: 7:30 a.m.-5:00 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas C. Lee can be reached on (571) 272-3667. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
